

Elster® SM-RI-X

Turbine Gas Meter

Sizes from DN200 to 600 (8" to 24")

Applications

Custody Transfer approved Gas Flow Measurement from low to high operating pressures.

Gas Transmission, Distribution and Industrial applications

Brief information

Honeywell Elster SM-RI-X turbine gas meters are robust meters for operation under the most demanding conditions (offshore and onshore). Over decades they have proven to be highly accurate from first calibration on to the end of their lifetime many years later. The longterm measurement stability and highest reliability of the SM-RI have made it become a standard in high volume gas measurement. These are also reasons why SM-RIs are used by recognizable calibration labs around the world as reference meters of choice.

The SM-RI-X is used for custody transfer applications along the complete gas value chain high from production, to pipeline transmission stations, down to local distribution and city gate stations. SM-RI-X turbine meters are also applied at larger industrial and commercial gas consumers where accurate gas measurement is key. Power plants are only one example.

For sizes smaller than DN200 (8") Honeywell offers the TR22 turbine gas meter which is available in sizes DN50 to DN150 (2" to 6").

Operating Principle

The gas flowing through the meter sets the turbine wheel in motion. The number of revolutions of the wheel is proportional to the volume passing through the meter. To optimize measurement performance the patented X4X flow conditioner eliminates flow disturbances such as swirl or asymmetric flow that are created by bends or T-pieces upstream of the meter for example.

After the flow conditioner the cross section of the meter is reduced to increase flow velocity and consequently increase the driving impulse of the medium on the turbine wheel.

The combination of flow conditioning and optimized measurement unit including the turbine wheel make it possible to measure the flow rate accurately even at low flows and pressures. The shaft on which the turbine wheel is fixed is held in place by robust ball bearings that help to maintain high performance for a long time with minimized maintenance needs. Via gears and a magnetic coupling the revolutions of the turbine wheel are transmitted to the 8-digit mechanical counter located in the pressure-less index head.

The outlet of the meter has been optimized to decrease pressure loss and create optimal flow conditions after the meter.

FEATURES & BENEFITS

- MID approval for fiscal measurement
- Conformity to EN12261, PED, ASME, ATEX and IECEx
- Lowest measurement uncertainty
- High repeatability
- Used as reference meter in major calibration facilities
- Meter sizes G650 to G16.000
- Max. measuring range 50 to 25.000 m³/h
- Nominal diameters DN200 to 600 (8" to 24")
- Operating pressure from 0 to 100 barg
- Flange rating in PN 10-100 and ANSI 150-600
- Temperature range: -25 °C to +70 °C
- Compact installation with inlet pipe length L ≥ 2 DN
- Thermowell built into meter housing (optional)
- Integrated HF-pulser (optional)
- Absolute ENCODER (optional)
- Direct mount of Honeywell EVC (optional)
- Designed for natural gas, town gas, butane, air, nitrogen, other gases on request

Multi-Index (MI-2)

The rugged design of the meter index (including the metal cover) has proven itself in the harshest environments and is IP67 certified. The MI-2 is equipped with an 8-digit mechanical index for continuous meter reading.

A low frequency output (reed contact) is included as a standard and can be connected to any Flow Computer or Electronic Volume Corrector.

The pulse output is equipped with inbuilt anti-tampering protection.

Measurement Uncertainty

The SM-RI-X turbine gas meter is designed and manufactured according to the European Standard for turbine meters EN 12261. SM-RI-X fulfills the error limit requirement as follows:

- ± 1.0 % for 0.2 Q_{max} to Q_{max}
- ± 2.0 % for Q_{min} to 0.2 Q_{max}
- smaller limits as an option

Pulse outputs

The SM-RI-X can be equipped with low, medium and high frequency outputs depending on customer requirements

Low frequency (standard)

- 1x LF output (type IN-S15) equipped with 1 or 10 magnets depending on resolution requirements

Medium Frequency (optional)

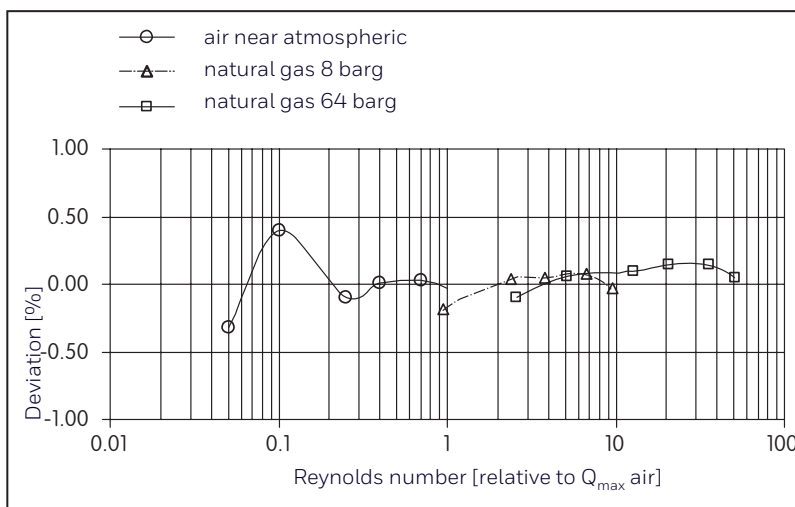

- 1x MF output (type MI-2) built into the mete

High frequency (optional)

- up to 2x HF outputs (one on the turbine wheel and one on the reference wheel) with >500 Hz at Q_{max} (depending on size)

Options available for the MI-2:

- Mechanical instrument Type 25H7 in accordance to EN 12261
- Medium Frequency Output
- Absolute ENCODER for digital data transfer between the meter and Flow Computer / EVC

Material

- Meter bodies: ductile iron (GGG-40) or forged steel.
- Turbine wheel: Aluminum

Approvals and Conformity

Elster® SM-RI-X turbine gas meters are manufactured in accordance with DIN EN ISO 9001:2008 (DIN EN ISO 14001).

They are designed, produced and tested in accordance with the following guidelines, standards and references.

General

- European Standard for Turbine Meters EN 12261
- OIML Provision R137-1

Metrology

- EC directive 2014/32/EU (MID)

Hazardous Area

- EC directive 2014/34/EU (ATEX)

Pressure Equipment

- EC directive 2014/68/EU (PED)
